PROJECTS

Stör: Peer to peer physical storage web platform that allows people with extra space closet to monetize that space by providing it to people in need of a storage solution. A beta version is currently being improved/. I worked on the development team using Node.js and MongoDB on the backend and Vue.js, HTML and CSS on the front end.

Life Expectancy Console App: This application was created to analyze the life expectancy on a global scale of various countries. This application also provides analyses which includes growths and declines in the life expectancy of countries, regions and continents based on various factors including but not limited to Income brackets and environmental conditions. This is a console-based application and was developed using **Python**. The source code is available on GitHub. Lasted from October 2017- December 2017
